Multiplicación de polinomios por polinomios

$$\begin{aligned} 1) (9m^2 + 3n)(6m^2 + 5n) &= \\ 54m^4 + 45m^2n + 18m^2n + 15n^2 &= \\ = 54m^4 + 63m^2n + 15n^2 \end{aligned}$$

$$\begin{aligned} 2) (8a^2 + 5b)(9a^2 - 2b) &= \\ 72a^4 - 16a^2b + 45a^2b - 10b^2 &= \\ = 72a^4 + 29a^2b - 10b^2 \end{aligned}$$

$$\begin{aligned} 3) (5x + 6y)(5x - 6y) &= \\ +25x^2 - \cancel{30xy} + \cancel{30xy} - 36y^2 &= \\ = +25x^2 - 36y^2 \end{aligned}$$

$$\begin{aligned} 4) (5x + 6y)(5x + 6y) &= \\ +25x^2 + 30xy + 30xy + 36y^2 &= \\ = +25x^2 + 60xy + 36y^2 \end{aligned}$$

$$\begin{aligned} 5) (9a - 3b)(9a + 5b) &= \\ +81a^2 + 45ab - 27ab - 15b^2 &= \\ = +81a^2 - 18ab - 15b^2 \end{aligned}$$

$$6) (4m + 5n)(6m - 2n)$$

$$+ 24m^2 - 8mn + 30mn - 10n^2$$

$$= +24m^2 + 22mn - 10n^2$$

$$7) (-8x + 5y)(-8x - 5y)$$

$$+ 64x^2 + \cancel{40xy} - \cancel{40xy} - 25y^2$$

$$= +64x^2 - 25y^2$$

$$8) (4a^5 + 3b^8)(6a^5 - 2b^8)$$

$$+ 24a^{10} - 8a^5b^8 + 18a^5b^8 - 6b^{16}$$

$$= +24a^{10} + 10a^5b^8 - 6b^{16}$$

$$9) (2x + 5y)(2x - 5y)$$

$$+ 4x^2 - \cancel{10xy} + \cancel{10xy} - 25y^2$$

$$= +4x^2 - 25y^2$$

$$10) (-5x - 6y)(5x + 6y)$$

$$- 25x^2 - 30xy - 30xy - 36y^2$$

$$= -25x^2 - 60xy - 36y^2$$
